

ESTABLISHING OPEN SCIENCE PRACTICES AT FOWI

06 JUNE 2019 1:00PM

Open science is the future of organisational psychology.

Open Science Practices (OSP) refer to a broad range of research practices, ultimately aimed at increasing the transparency, accessibility and reliability of scientific research. Open science is becoming increasingly important beyond intrinsic epistemological value; with many funding bodies, journals, and impact reporting requirements now expecting engagement with open science as standard. However, organisational psychology has not embraced OSPs to the same extent as other disciplines; providing opportunities for us to establish innovative solutions to our unique challenges, bottom-up.

This workshop will bring you up to speed on OSP, covering the fundamental concepts, tools and procedures (e.g., pre-registration, registered reports [Christoph Schild], sharing and reproducibility, and open source); and provide opportunities to discuss the unique challenges faced by OSP in IO psychology. I will be seeking interest and feedback on a strategy for open science at FOWI.

**Open Science at
FOWI**

**Led by Michael David
Wilson**

**Presentations by
Christoph Schild and
dr. Patrick Dunlop**

**No preparation or
materials are
required**

**FOWI common room
– 4th floor**

**FUTURE OF WORK
INSTITUTE**

78 Murray St
Perth, WA6000

No RSVP required, for
